## AM/PM

#### **Your Medication Nurse will:**

- Review all of your medication; prescription medications, over the counter medications, herbal preparations, vitamins, supplements, etc.
- Develop a checklist of medications, including vital information such as dosage times and amounts, and substances to avoid while you are using certain medications.
- Set-up reminders to ensure that a daily medication routine is established. Help you to understand your medication. Answer your questions regarding the use, effects and side effects of your medications.
- Update your medication list so that you have a handy, accurate list to bring to physician visits.
- Check labels, expiration dates and any warnings that may be indicated.
- Watch closely for interactions or side effects and notify your physician if you experience any problems.
- Ensure regular review of your medications by your physician(s).
